AutoCAD is the most popular software for 2D drafting, which is used primarily for creating architectural drawings, blueprints, and construction drawings.

AutoCAD is available for several platforms, including macOS, Windows, and Linux operating systems, along with iOS and Android mobile apps. AutoCAD can connect to popular 3D CAD/BIM (Building Information Modeling) software applications.

This tutorial will provide a step-by-step guide to get you up and running with AutoCAD. It is not meant to be a thorough tutorial, but rather to provide an overview of AutoCAD and a foundation to start with. We have created this tutorial for AutoCAD users who are new to the software, but it also covers the basics of AutoCAD if you have been using it for a while.

AutoCAD 101 After installing AutoCAD, you need to create a user account. When you first launch AutoCAD, you will be

prompted to create a user account. The user account is how you access AutoCAD, and is also where you store your settings. You can change your account settings in the Preferences window, or under your user account in the desktop. You can also right-click on your user account and select properties to change your settings. At the bottom left of the launch screen are three horizontal lines. The top line says “Active”, the middle line says “Inactive”, and the bottom line says “Quit”. Click on the “Active” line.

You will be presented with a dialog box asking you to create a user account. Enter your name, create a password, and choose an account type (standard or administrator) for your AutoCAD installation. You can set the password for the account using the same password as your login password. If you do not know your login password, you can ask your system administrator. You will be prompted to choose your location. You can choose your location using your current time zone settings, your region settings

(North America, Europe, or All) or the city and region settings (city, county, state, province, country). Click the “Set as default” option if you want this location to be the default for all new AutoCAD users. You will be asked for a company name. This will be displayed as your company name under your user account. If you do

Benefits According to legend, a user named "John Wesley Smith" created the first AutoLISP coding in 1987. A few years later, the AutoLISP language was made freely available for people to use

and for systems to run. AutoLISP was used to solve problems by programmers and designers at Autodesk. One problem that was tackled by AutoLISP was the inability of existing CAD systems to read a part, like a transformer, that was entered as a drawing in a standard drawing format. The AutoLISP project offered the ability to solve this problem in the file format that was entered. This project also allowed designers to be able to create a specification of a product they wanted in AutoLISP,

and have it translated into a standard drawing format. These drawings could then be read by existing a1d647c40b
